

This is a 4-week field and laboratory program that is collaborative project between SUNY New Paltz, the University of Maine and the University of Zadar, Croatia.

Nadin is a moderately-sized center in Croatia's Ravni Kotari region along the Adriatic Sea, located just outside the modern city of Zadar. The area was one of the most urbanized regions of Dalmatia in antiquity. The site has several different occupational phases beginning with an Iron Age/Roman Republic fortified settlement and culminating in a 16th century Turkish fort.

Students will be involved in both field excavations of Iron Age/Roman period components and the laboratory analysis of previously excavated skeletal remains.

The program is offered through the Center for International Programs (CIP) at SUNY New Paltz for **3 or 6 credits**. Students will need to complete an application, along with references, to be considered for the program.
