presents

ROUNDTABLE ON ZIKA

PERSPECTIVES FROM PUBLIC HEALTH,
ENTOMOLOGY AND WOMEN'S HISTORY

The Zika virus, spread by the Aedes mosquito and believed to be associated with microcephaly and birth defects in the newborn, is currently causing global alarm as it reaches pandemic level. We invite you to a roundtable discussion on this topic. Brief presentations will be given by social and natural scientists with expertise in entomology, infectious disease control, environmental health and women's health.

Presentations by: Aaron Haselton, *Biology*

Benjamin Junge, *Anthropology, Latin American & Caribbean Studies*

Brian Obach, *Sociology, Environmental Studies*

Meg Devlin O'Sullivan, *Women's, Gender & Sexuality Studies*

WEDNESDAY, APRIL 6
HUMANITIES BUILDING, ROOM 305
12:30–1:30 P.M.
